

Questions & Answers
TM & CRADLE BIG 2.0 PROGRAMME: DESIGN AND DEVELOPMENT OF PREDICTIVE AND PREVENTIVE PLATFORM TO ENHANCE FIBRE INFRASTRUCTURE RESILIENCE

No	Part	Item/Topic	Tenderer's Question	TM's Response
1	Part V – Fibre Infrastructure / Topology	Physical Cable Specifications	Physical Cable Specifications- Could TM clarify the physical dimensions and size (e.g., outer diameter, cable type/sheathing) of the existing fibre cables deployed along the designated routes for the POC and Pilot stages?	There are a few types of fibre specifications deployed. However, the information of physical cable specifications is deemed not pertinent at this stage. The necessity of such information will be further discussed at later stage
2	Part V – Fibre Infrastructure / Topology	Core Count & Capacity	Core Count & Capacity- What is the total core count (or standard range of core counts) available in the existing fibre cables installed along these target locations?	The fibre dimensioning/capacity is out of the scope for this project. The solution shall works in developing better fibre network resiliency regardless of the fibre capacity/dimensioning
3	Part V – Hardware & IoT / Sensing Infrastructure	DAS Implementation Feasibility	DAS Implementation Feasibility- If the proposer proposes a Distributed Acoustic Sensing (DAS) approach, will TM allow/allocate dedicated spare (dark) cores within TM's existing cable infrastructure to be used for DAS testing and deployment during the POC and Pilot stages?	The proposer is expected to ideate solutions, including deploying optimal and feasible hardware for the stated problem statement. The utmost preference is that the project develops its own solution without leveraging any existing assets/infrastructure in the TM environment. However, TM will accommodate the request if it deems fit to be tested in a controlled environment (lab or production).
4	Part I - Phase 1 Submission	Volume II - SSM Documents submission	The current SSM system (incl MyData, e-Info) is down due to ongoing maintenance. We are not able to retrieve: 1. Attestation of Company Good Standing (ACGS) from SSM e-Info portal 2. Financial comparison for latest 3 years from RFP float date, from SSM e-Info portal Will this affect our eligibility for the tender's Phase 1 submission?	Due to maintenance of the SSM e-Info system, only the submission of the SSM Report can be made after the maintenance period. All other required documents shall be submitted as scheduled.
5	Part VI	Price Schedule	To provide a fair representation of the price quotation, may we know the length/area/scope of fibre monitoring that will be conducted during the POC and pilot? This significantly influence the pricing of hardware for data collection/input	The relevant details will be shared by today through an official Addendum.
6	Part I - Phase 1 Submission	Volume II - SSM Documents submission	In the possibility of us bringing a local startup as subject matter expert for this tender, how would TM prefer us to declare this? Are they also required to sign the NDA provided under Part III_Appendices?	Yes. The Proposer should declare the local startup's involvement in the proposal, including its role and scope of participation. The Proposer remains fully accountable for the submission and contractual obligations. The NDA (Appendix G, Part III) must be submitted together with the proposal, and any party involved in the proposal that may access TM confidential information should be subject to equivalent confidentiality obligations.
